

## **Dalmac Energy to acquire \$5-million of equipment**

2006-05-29 09:12 ET - News Release

Mr. John Babic reports

### **DALMAC TO PURCHASE \$5.0 MILLION OF OPERATING EQUIPMENT**

Dalmac Energy Inc. is proceeding with a \$5.0-million purchase of new operating equipment.

The equipment will consist of hot oiler units, pressure trucks, sour sealed tri drive haulers, tri drive tractor units, Combination Vacs, sour sealed bulkers and various other equipment. Delivery is expected in the fall of this year.

The increasing levels of hydrocarbon drilling and production activity in the west-central Alberta region are creating an excess demand for more oil field services such as those provided by Dalmac Energy. Dalmac currently services the Alberta areas of Fox Creek, Hinton and Grande Cache. Current plans also include expanding coverage into the Whitecourt and Edson area of west-central Alberta.

Dalmac is a provider of hot oiler, vacuum, hydro vac, pressure and tanker truck services as well as methanol/glycol delivery and distribution services. After the completion of the above purchase Dalmac will have a total of about 89 operating units.

With the current company fleet operating at full capacity, the additional purchases will enable Dalmac to meet the continued demand for its products and services. It is expected that on an annual "full run" basis these new purchases should contribute to an EBITDA (earnings before interest, taxes, depreciation and amortization) lift of about \$2.0-million to \$2.5-million per year.

We seek Safe Harbor.
